

# threader

This set contains a table, clamps, a carbide bit, a centering collar, six inserts, and six taps with pilots. Your router clamps directly to the wood and aluminum table and is aligned using an included aluminum centering sleeve. A precision-machined low-friction threading insert ensures accuracy without marking your wood. Internal threads are produced with a combination tap specially designed to cut easily and cleanly. The tap has a removable pilot with the capacity to tap a full thread to within 7/16" of the bottom of a hole, rendering separate bottoming taps unnecessary. The socket-head screw that secures the pilot to the tap body is quickly and easily removed and is just as easily reattached with the included wrench. To change sizes, remove the aluminum plate from the table, replace the insert with the new size, and reinstall the plate in the table.

The Beall  
Wood  
Threader

**Set of 6 Inserts**

**(1/2", 5/8", 3/4", 1", 1 1/4", 1 1/2")**

Cuts threads in wood with a compact  
router to prevent cross-grain breakage
